Gyptone ceilings
3.2.4 Trap system

Gyptone®

Reflecting everyday life

Trap system

Gyptone Trap is a special ceiling system which gives very good access possibilities to concealed installations. Trap units comprise pre-painted Gyptone tiles completed with a white-lacquered steel frame.

The system also includes sections for connection to direct friezes and along corridor walls. The Trap unit can be let down to either side and be allowed to hang freely to give convenient access to services along the entire corridor.

Units

The system consists of several units which can be combined in different ways.

This flexibility means that the system can be tailored to each individual project.

For more information about installation possibilities and details of solutions contact Gyproc.
