

Gyptone®

Gypsum Ceilings Solutions

Get the perfect ceiling feeling

SAINT-GOBAIN

Better ceilings Better spaces.

Ceilings are so much more than just a roof for interiors – they can elevate spaces to a whole new level and make a real positive difference to the everyday lives of end-users. Our series of gypsum-based ceilings solutions are crafted to meet every project demand, from cost-efficiency and high technical performance, to quick installation, adaptability, safety, acoustic control and stunning aesthetics.

CEILINGS

Designer Series

Explore our premium and perforated ceilings ranges to combine outstanding design possibilities with acoustic performance. Our Designer Series inspires architects to create spaces that are both stunning and comfortable.

Healthier Indoor Spaces with Gyptone® Activ'Air™

Gyptone® Activ'Air™ technology actively improves indoor air quality by removing up to 70% of the formaldehyde.

By choosing Gyptone® Activ'Air™, you not only improve the acoustic indoor climate but also enhance the indoor air quality, where VOCs like formaldehyde are decomposed and removed with the Activ'Air™ technology. This contributes to meeting the formaldehyde concentration limits defined by the WHO and ensures a healthy indoor climate for the children and adults who use the rooms.

Bring your dream ceiling to life with Gypsum Ceiling Solutions.

Hard surfaces can significantly impact the acoustic environment in spaces like kitchens or dining rooms. High reverberation times make conversations more difficult and raise overall noise levels, posing a serious challenge to indoor sound quality.

Examples of hard materials and surfaces include

- Wooden floors
- Tiled floors
- Doors
- Glass surfaces
- Walls made of concrete, aerated concrete, or bricks

By considering these elements, you can better understand how to manage the acoustic comfort of a space and improve the overall indoor climate.

Best-In-Class Certifications

Gyptone® acoustic solutions are designed to enhance both acoustics and aesthetics in virtually any space. Our systems promote superior indoor air quality and feature durable, long-lasting surfaces, all crafted with sustainability at their core.
