The Gyptone Activ’Air acoustic ceiling range are designed to improve the acoustic climate and air quality in schools, kindergartens, offices, retail and in the health sector. The ceilings will reduce VOC levels, reverberation time and improve speech intelligibility in a given room.

The Gyptone Activ’Air BIG acoustic ceilings range allow you to create large ceiling surfaces without visible joints. Only the oblong, hexagonal or square perforations are visible. The surfaces are robust with high impact resistance.

The Gyptone ceilings are made from predominantly recycled gypsum and have very strong sustainability properties. Used Gyptone tiles can be completely recycled in the production of new gypsum products.

The acoustic measurements meet the requirements of ISO 354.

The construction height specifies the distance between the undersides of the suspended ceiling and the existing floor/ceiling construction.

The sound absorption is affected by construction height and by any mineral wool installed behind them.
Design and technical information

**Product description**
Gyptone BIG is a gypsum based acoustic ceiling. The Gyptone BIG are backed with an acoustic tissue.

**VOC reducing properties.**
Gyptone Activ’Air is designed to decompose VOC emissions from other building materials such as paint, furniture, carpets etc. The patented technology decompose VOC’s, like formaldehyde, into non harmful inert compounds. Activ’Air can reduce formaldehyde room concentrations with up to 70%.

**Fixing**
Gyptone BIG is suitable for direct or suspended screw fixing and the system is not demountable.

**Construction height**
The smallest possible standard construction height with GK grid on one level is 145 mm including the board.

**Surface**
Gyptone BIG is supplied unpainted. The surface finish is done on site after jointing is completed. Ceilings must be painted with a shorthaired roller. The boards must not be spray-painted as this considerably impairs sound absorption.

**Fire**
A2-s1, d0.

**Dimensional stability**
Gyptone BIG should be used in areas with a relative humidity which does not constantly exceed 70%.

**Dimensions**
Modular size 1200 x 2400 mm.
Board thickness: 12.5 mm.

**Weight**
Approx. 8 kg/m².

**Cleaning**
Depends on the surface treatment.

**Maintenance**
Repainting must be done with a shorthaired roller. The boards must not be spraypainted, as this impairs sound absorption.

Gyptone acoustic products are tested by Danish Indoor Climate Labelling and according to the French Health and Environmental Authority’s labelling scheme. Used acoustic ceiling products can be fully recycled into the production of new gypsum products.
