The Gyptone acoustic ceiling range is designed to improve room acoustics environment with optimized reverberation time and improved speech intelligibility in a given room, like schools, kindergartens, offices, retail and the health sector. Product with the ActivAir technology will also improve the indoor air quality, by reducing the formaldehyde level.

The Gyptone tile range includes 4 different perforation designs: Line, Sixto, Point, Quattro and Base without perforation, all with A, D1, D2 or E15 edge.

Gyptone acoustic tiles are durable and have a strong surface which is easy to clean and maintain. The result is that a Gyptone tile will last for a lifetime.

A big part of a Gyptone tiles are made of recycled gypsum and have some very strong sustainability properties.

Used Gyptone tiles can be completely recycled in the production of new gypsum products.

### Acoustics

The acoustic measurements meet the requirements of ISO 354.

The construction height specifies the distance between the undersides of the suspended ceiling and the existing floor/ceiling construction.

The sound absorption is affected by construction height and by any mineral wool installed behind them.
**Gyptone Sixto 60**

**Product description**

Gyptone Sixto 60 is based on a specialized perforated gypsum board combined with an acoustic tissue, which provides excellent acoustic properties.

**Activ’Air technology (Improved air quality)**

Gyptone Activ’Air is designed to decompose formaldehyde emissions from emitting building materials, paint, furniture, carpets etc., into non-harmful inert compounds. Gyptone Activ’Air ceilings can reduce formaldehyde concentrations with up to 60%.

**Fixing**

Gyptone Sixto 60 is suitable for all standard exposed and concealed grid systems.

**Construction height**

The smallest possible standard construction height is as follows:

- **Edge A** + E15 (exposed grid) = 100 mm.
- **Edge D1** (concealed grid) = 100 mm
- **Edge D2** (concealed grid) = 150 mm

**Surface**

The Gyptone Line is supplied pre-painted. The paint used is color NCS 0500.

**Fire**

A2-s1, d0.

**Design and technical data**

*The effectiveness of the Activ’Air technology has been tested by the accredited Eurofins laboratory. The tests show that a Gyptone ceiling with Activ’Air reduces up to 60% of the formaldehyde in a controlled test environment.

**Maintenance**

Repainting must be done with a short hair roller. The tiles must not be spray-painted, as this impairs sound absorption.

**Perforation size:** Dia. 11 mm, cc 20 mm

**Perforated area:** 17%

**Measurement are for edge A.**

**Dimensions**

Modular sizes: 600 x 600

Weight

Thickness 10 mm: Approx. 6.6 kg/m²

Thickness 12.5 mm: Approx. 8 kg/m²

**Cleaning**

Gyptone Line can be cleaned with a damp cloth. Most standard cleaning agents can be used.

**EMISSIONS DANS L'AIR INTÉRIEUR**

*Information sur le niveau d'émission de substances volatiles dans l'air intérieur présentant un risque de toxïdité par inhalation, sur une échelle de classement A, B, C de 0 à 4 (émissions faibles à très élevées).*

Gyptone acoustic products are tested by Danish Indoor Climate Labelling and according to the French Health and Environmental Authority’s labelling scheme. Used acoustic ceiling products can be fully recycled into the production of new gypsum products.
