Public buildings

We all go there. To buildings which are places of work for many people and for others a place where one comes as a user and as a citizen.

The common factor for a public building must be that it is nice to be there. The rooms must be able to accommodate many people who each perceive impressions differently.

Gyptone is simple in its design. Gyptone creates harmony in a room where there are often high ceilings or the need for acoustic features because a lot of people move around. The big continuous surfaces, with or without patterns, also provide a good contrast to the art decorations in each room where one wants to create a special mood or experience.

On www.gyptone.com you can easily access information especially about performance and durability, which are key words in buildings which have a lot of users.

Inspiration in this brochure:
- Link between art on the wall and the ceiling
- Hospital hall
- Library
- Reception and entry
- Staircase and hallway at hospital
- Airport/gate and transit lounge
- Courtroom
Gyptone.com is not just a home page. Here you can find all Gyptone products "live" – see www.gyptone.com – choose the 3D product gallery and you will enter a 3D universe where all our products can be turned around and over, put together with different systems and displayed exactly the way you want them in your project.
